

J RAGHAVENDRA

Distributed Systems & Cloud Infrastructure Software Engineer

raghavendrarahgu71537@gmail.com | Bangalore, Karnataka | github.com | linkedin.com

TARGET OBJECTIVE:

Seeking Fall 2026 Software Engineering Internships and 2027 Full-Time SWE Roles (Systems, Distributed Platforms, Cloud Infrastructure).

EDUCATION:

University of California / Top CS Program

Bachelor of Science in Computer Science, Minor in Mathematics

Cumulative GPA: 3.94 / 4.00 | Expected Graduation: May 2027

Relevant Coursework: Distributed Systems, Operating Systems, Algorithms, Computer Architecture, Database Systems, Compilers, Computer Networks

TECHNICAL SKILLS:

- * Languages: Rust, Go (Golang), C, C++, TypeScript, Python, SQL, Bash.
- * Systems & Distributed: Raft Consensus, gRPC, Protobuf, Concurrency, Linux Socket Programming, LSM-Tree, Kafka, Redis.
- * Cloud & Infrastructure: Docker, Kubernetes, eBPF, AWS (EC2, S3, RDS), GitHub Actions CI/CD, Linux Cgroups, Prometheus, Grafana.

WORK EXPERIENCE:

Apex Cloud Technologies â Software Engineering Intern (Distributed Systems & Ingress) | Jun 2025 â Aug 2025 (San Francisco, CA)

- * Architected an in-memory distributed LRU cache layer in Go with lock-stripped hashing, reducing database read load by 44% across 12 tier-1 services.
- * Profiled and eliminated CPU contention hotspots in the gRPC routing gateway using Go pprof, improving P99 latency by 32ms under peak load.
- * Implemented automated Canary rollback controllers integrated with Prometheus metrics, preventing 3 potential SLA breaches.

Novaflow Systems â Backend Engineering Intern (Data Infrastructure) | Jan 2025 â May 2025 (Seattle, WA)

- * Redesigned time-series aggregation pipeline in Rust, achieving an 8.5x throughput improvement (45,000 events/second).
- * Optimized PostgreSQL schema indexes and partitioned 1.2B rows, decreasing heavy query latency from 4.2s to 280ms.
- * Built end-to-end integration test harness with Docker Compose, raising test coverage from 62% to 91%.

University Systems & Networking Lab â Undergraduate Research Assistant | Sep 2024 â Present

- * Co-authored research prototype analyzing tail-latency penalties of Raft leader-election delays under asymmetric network partitions.
- * Stress-tested state machines using Linux NetEm and traffic control (tc) under 30% packet loss.

FLAGSHIP PROJECTS:

AuraKV â Distributed Consensus Key-Value Store (Rust, Tokio, Raft, gRPC, LSM-Tree)

- * Maintains 85,000 writes/sec with <3.8ms P99 latency across 5 geo-distributed nodes during simulated 30% node packet loss.
- * Jepsen-tested linearizability verification with zero data loss across 1,000 partition injection cycles.

HyperProxy â High-Concurrency Layer 7 Reverse Proxy (Go, eBPF/XDP, HTTP/2, TCP)

- * Reduced tail P99 latency by 58% and memory footprint by 4.2x vs Envoy baseline under 140,000 concurrent keep-alive connections.

TraceFlow â Real-Time Distributed Tracing Pipeline (TypeScript, Rust/WASM, ClickHouse, OpenTelemetry)

- * Ingests 250k spans/sec with <50ms query latency over 200GB+ historical trace datasets.

ACHIEVEMENTS & HONORS:

- * 1st Place Overall Winner â HackTech 2025 (MLH Grand Prize, 180+ teams)
- * ICPC Regional Finalist (Top 4 finish) & LeetCode Guardian (Rating 2180+, Top 1.2%)
- * Accepted Contributor â CNCF Upstream Cloud-Native Project
- * Dean's Honor List & Tau Beta Pi Engineering Honor Society (All semesters)
